QUALITY CONTROL

How we check an order

Sample first: bulk starts only after you approve a physical sample.

During production: every piece is checked against your approved sample.

Final inspection: on orders of 500 pieces or more, we check a random sample of the order by AQL (acceptance quality limit) sampling. No critical defects pass. The limits are AQL 2.5 for major defects and AQL 4.0 for minor ones.

Your inspector is welcome: book SGS, QIMA, Intertek or another firm before you pay the balance. Their fee is yours.
